Write a simple C++ console program for a funny AI Roast Generator project.

The program should:

- Ask the user to enter their name
- Store at least 10 funny roast lines in a vector
- Use {name} inside every roast line
- Print one roast at the end

Keep the code beginner-friendly because I am a 1st year B.Tech student.

Use simple English comments to explain the code.

Do not use difficult concepts like classes or pointers.

C++ 

```
#include <iostream>
#include <vector>
#include <cstdlib> // for rand() and srand()
#include <ctime>   // for time()

using namespace std;

int main() {
```

C++

Now improve the roast generator program.

I want the program to show a different roast every time it runs.

Please:

- Use `srand(time(0))` and `rand()`
- Randomly pick one roast from the vector
- Explain the random logic with simple comments
- Keep the code clean and easy to understand

C++

```
#include <iostream>
#include <vector>
#include <cstdlib> // Needed for rand() and srand()
#include <ctime>   // Needed for time()

using namespace std;

int main() {
```

Update the program so the {name} placeholder gets replaced with the actual user name.

Example:
If user enters Rahul, output should become:
"Rahul writes code so slowly that even a turtle gave up."

Use simple string replacement logic only.
Explain the replacement code in beginner-friendly comments.

C++

#include <iostream>
#include <vector>
#include <cstdlib> // For rand() and srand()
#include <ctime> // For time()

using namespace std;

int main() {

 // Variable to store user's name

Improve the roast generator code more.

Please:

- Prevent crashes if the user enters an empty name
- Show a friendly message for empty input
- Make variable names better
- Improve formatting and spacing
- Add proper comments
- Keep the code simple like a student project

C++

```
#include <iostream>
#include <vector>
#include <cstdlib> // For rand() and srand()
#include <ctime>   // For time()

using namespace std;

int main() {

    // Variable to store user's name
    string userName;
```
